Profile Summary

Computer science graduate with strong knowledge of Java, Spring Boot, REST APIs, and ReactJS. Experienced in developing scalable backend applications with JWT authentication, Spring Security, and MySQL. Passionate about backend engineering and problem-solving.

Education

Siddhartha institute of science and technology

Bachelor of technology in computer science and engineering (aggregate 77.01%)

2025

Puttur, Andhra Pradesh

Rajendra collegiate

Intermediate in Science (67.2%)

2020

Chapra, Bihar

SVH/S chakia chaturvedi

10th Matriculation (64.8%)

2018

Siwan, Bihar

Relevant Coursework

- Data Structures
- Algorithms Analysis
- Database Management
- OOP Programming
- Software Development

Projects

CookCraftAI | AI-Powered Recipe Generator | Java, Spring Boot, Spring AI, ReactJs

BACKEND-LINK: github.com/Anuj214B4/CookCraft-AI-Backend

FRONTEND-LINK: github.com/Anuj214B4/CookCraft-AI-Frontend

- Built a scalable full stack AI recipe generation application using Spring boot, Spring AI, MySQL, ReactJs, and OpenAI Compatible APIs.
- Designed RESTful APIs for AI chat, recipe generation, and user authentication workflows.
- Implemented OAuth2 and JWT-based authentication and authorization using Spring Security.
- Built responsive frontend interfaces with React, Vite, Tailwind CSS, and React Router and Implemented markdown rendering for dynamically generated AI recipe and AI chat responses using React Markdown.
- Configured MySQL database integration using Spring Data JPA and Hibernate, Added centralized exception handling and validation mechanisms in Spring Boot backend services.
- Designed modular backend architecture with controller, services, DTO, repository, and security layers.
- Optimized frontend routing and user flow for login, signup, AI chat, and recipe generation module.

E-Commerce Web Application-Backend | Java, Spring Boot, Spring Data JPA, MySQL

- Engineered a scalable e-commerce backend using Spring Boot, REST APIs, and MySQL to support product, cart, order, and user management workflows.
- Implemented secure authentication and role-based authorization using Spring Security and JWT token-based authentication.
- Optimized relational database operations using Spring Data JPA, Hibernate, and efficient entity mappings, and Designed RESTful endpoints with proper validation, exception handling, and API response standardization.
- Built modular service and repository layers to improve maintainability, scalability, and clean code organization.

Technical Skills

Backend: Java, Spring MVC, Spring Boot, Hibernate ORM, JPA, Spring Data JPA, Servlet, JDBC, Spring Security

Databases: RDBMS, MySQL

Frontend: HTML, CSS, ReactJs, JavaScript

Others: Multithreading & Concurrency, REST APIs, JSON, Maven, Apache Tomcat, Postman, Git, OOP programming, Java 8+ features, DSA.

Achievements & Certifications

- Actively practiced competitive programming and backend development concepts including REST APIs, Spring Boot, JWT authentication, and scalable application design.
- Full Stack Java Development – JSpiders
- Introduction to industry 4.0 and industrial IOT–NPTEL
